INTELLIGENT INSULATION

South Australian summers demand protection from radiant heat. Winters require warmth retention.

Aura™ helps regulate indoor comfort, reduce glare and soften external noise – without compromising style.

A refined palette of contemporary colours, textures and patterns ensures compatibility with any style of home.

HOW DO HONEYCOMBS WORK?

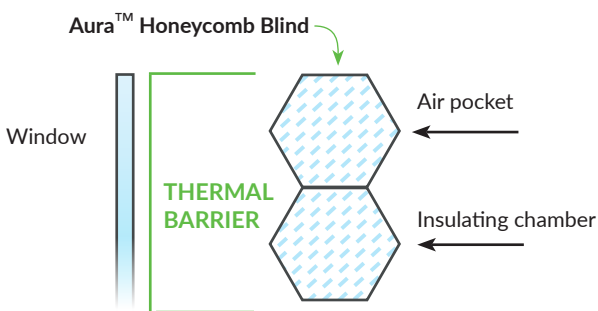

Viewed in cross-section, Aura™ Honeycomb Blinds (also called Cellular Blinds) form a series of honeycomb-shaped air chambers.

These chambers trap still air, creating an insulating barrier between the glazing and your interior space.

This air layer slows the movement of heat in both directions:

- Reduces heat gain during summer
- Reduces heat loss during winter

By introducing structured air pockets, cellular blinds increase the effective insulation of your window system.

In technical terms, this improves the window's overall **R-Value (see reference right)** – a measure of resistance to heat flow.

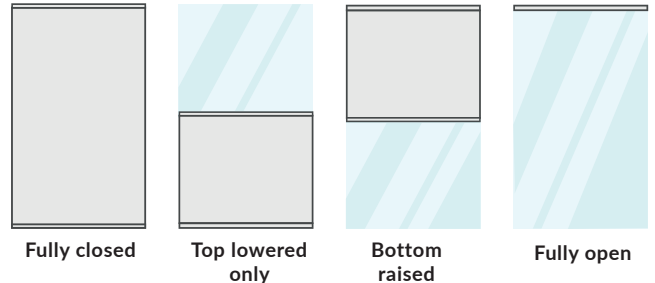

The higher the R-Value, the better the insulation performance.

Unlike flat fabric blinds, cellular construction introduces depth and measurable thermal resistance.

Comfort is no longer decorative. It's engineered.

**For optimal results, professional installation is recommended. Tracks are subject to width limitations.*

VERSATILE CONFIGURATIONS

R-Value and your Windows

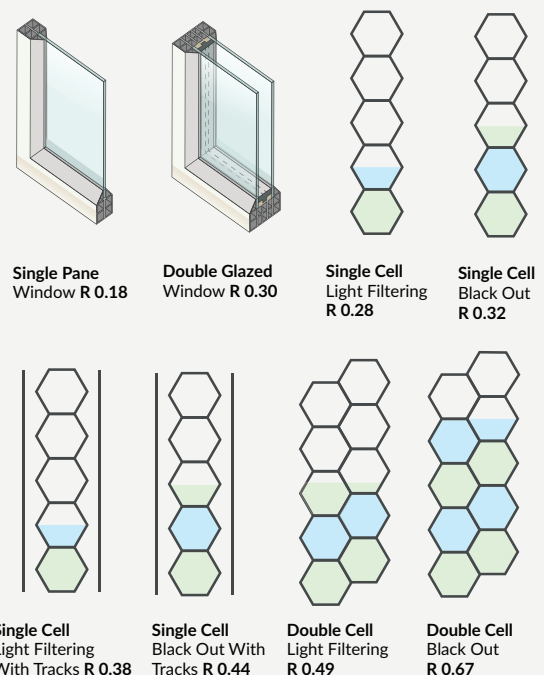

Windows have their own insulation rating, called an R-value. A typical window has an R-value between R-0.9 and R-3.0, depending on the type of glass and construction.

Because glass transfers heat more easily than insulated materials, windows can be a major source of heat loss in winter and heat gain in summer.

The chart below shows the R-value of different cellular shade fabrics when installed over a window.

Note: The R-values listed for each fabric represent the insulating performance of the shade itself, not the combined R-value of the shade and the window.

In general, the higher the R-value, the better the insulation against heat and cold.

Aura™ Honeycomb Blinds are available in a range of configurations, fabrics and operation styles – so you can choose the right balance of light control, privacy and insulation.

TOP-DOWN / BOTTOM-UP OPERATION

Lower the blind from the top to allow daylight while maintaining privacy below – an architectural solution ideal for street-facing homes.

OPERATION OPTIONS

Available with standard cord, continuous cord loop or modern cordless systems – including child-safe configurations for family homes, including skylights.

SMART HOME AUTOMATION

Motorised Aura™ Honeycomb Blinds can integrate with smart home systems, allowing you to control blinds via remote control, smartphone app, or voice assistant. Schedule blinds to open and close automatically to improve comfort, privacy and energy efficiency throughout the day.

COMPACT STACKING

Aura™ compresses into a minimal, flat stack when raised – preserving views and maximising natural light. Ideal for tall glazing, skylights and tight recesses.

FLUSH, CLEAN LINES

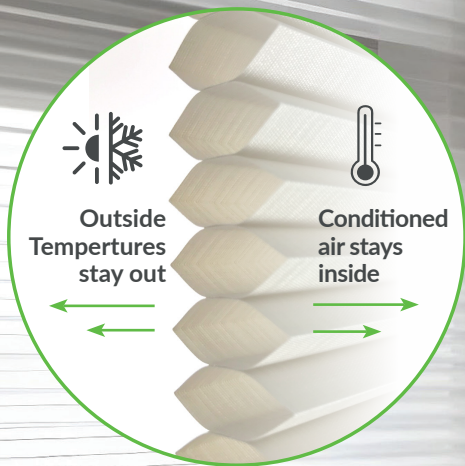

Colour-matched headrails and tailored sizing ensure seamless integration – even in limited-space or door applications.

LIGHT FILTERING, MESH OR BLOCKOUT

Choose mesh fabrics for daytime privacy, light filtering for soft illumination, or foiled blackout for complete light control and enhanced thermal performance.

SINGLE OR DOUBLE CELL

Available in 25 mm, 38 mm & 45 mm cell sizes, with double cell construction for elevated insulation performance.

EXPERIENCE AURA™

Visit our showrooms at Unley, Fulham or Mt. Barker or arrange a free in-home consultation with a Country Design Consultant.

THE COUNTRY BLINDS DIFFERENCE

- ✔ Professional in-home assessment ensures your Aura™ blinds are selected and specified correctly
- ✔ Expert Guidance
- ✔ Measured and professionally installed by our own trained specialists – no subcontractors.
- ✔ Every Aura™ blind is custom made to specification.
- ✔ Trusted for over 35 years
- ✔ Built on reputation, service and enduring craftsmanship.
